DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 6,740,891. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 of the instant application is anticipated by claims 1-11 of U.S. Patent No. 6,740,891. Both sets of claims include an assembly arranged to communicate at least one utility to a component located in a vacuum chamber, comprising a conduit constructed to communicate said at least one utility to said component, said component being moveable in said vacuum chamber, a conduit shield substantially enclosing a space comprising the at least one conduit and substantially separating said space from said vacuum chamber, said conduit shield being constructed and arranged to allow for movement of the component, wherein a vacuum generator is provided that is coupled to said space and which is constructed and arranged to provide a vacuum in said space comprising the at least one conduit.
